

QUARTERLY REPORT

31 March 2010

Chalice Gold Mines Limited ABN 47 116 648 956

Highlights

- Infill drilling program completed confirming the high-grade mineralisation at Koka. These results will form part of a revised resource estimate (currently 944,000oz) expected in the June quarter
- Koka Feasibility Study on track for completion by July 2010
- Exploration drilling underway at priority Koka East and Koka South targets
- Option taken over Dragon Mining's 20% interest in Zara Project. Conversion will take ownership of the project to 100%
- Chalice to apply for listing on the Toronto Stock Exchange as part of the strategy to advance the Koka deposit to production
- A\$7.2 million capital raising successfully completed

INVESTMENT HIGHLIGHTS

High grade gold deposit
(944,000 oz @ 5.8 g/t)

Scoping study completed

Feasibility study by Mid-2010

Medium term production
potential

Large underexplored ground
position with potential for
discovery of additional
resources

Overview

Chalice Gold Mines Limited (ASX: CHN) made substantial progress in the March quarter towards its goal of becoming a significant African gold producer based on its rapidly advancing Zara Project in Eritrea.

Completion of infill drilling at Koka Main has continued to confirm the high grade nature of the ore body and these results will form part of a revised resource estimate expected to be completed in the June quarter.

Chalice now also has the option to take a 100 per cent* ownership interest in Zara following execution of an option agreement over the remaining 20 per cent of the project from Dragon Mining Limited.

Chalice has also announced its intention to list on the Toronto Stock Exchange, which will provide increased exposure to the larger North American and European capital markets. The Company has engaged Canadian broker and corporate advisory firm Haywood Securities Inc to act as the Company's sponsor for the intended application for the TSX listing.

* Refer to page 7 for details of the Eritrean Government participation rights

1.1 Koka In-fill Drilling Results

Assays have now been received from all 30 holes of a ~5,000 metre infill diamond drilling program (refer to Table 1) designed to further increase the Company's confidence in the high-grade mineralisation of the Koka Main Zone. These results, which are undergoing validation, will form part of a revised resource estimate for the Koka Feasibility Study.

Note: The metres quoted are down hole metres and gold grades are uncut with up to 2 metres of internal dilution (<0.25g/t gold). All samples are prepared at the Africa Horn Laboratory in Asmara, Eritrea and then analysed by Genalysis Laboratories in Perth, Western Australia.

Note 2: NSI = No Significant Intersections

Following the completion of infill drilling at Koka, diamond drilling commenced at the adjacent Koka East prospect. Eleven holes for 2,125 metres were completed in the first pass drilling, results for which are expected in the June quarter.

Planning and access preparation for drilling of the Koka South zone has been completed covering a zone approximately 500 metres south of Koka. Drilling commenced in the second week of April.

1.2 Feasibility Study Progress

Excellent progress has been made with activities in support of the Koka Feasibility Study. First-pass drilling of aquifers in the Zara Valley has confirmed the presence of more than adequate supplies of high quality ground water and drilling of a production bore field has commenced.

Four geotechnical holes were drilled into the high-wall of the conceptual Koka open pit and samples have been tested at the Western Australian School of Mines. Results will be included in the new pit design as part of the Feasibility Study. Packer test drilling and pitting has also been completed at the proposed tailings, mill, accommodation and airfield sites, all with positive results.

Field work for the environmental and socio-economic studies is now largely complete and reporting is well advanced.

All feasibility work during the quarter has confirmed the assumptions made in the Scoping Study and there has been no unexpected results. Delivery of the draft feasibility report is now expected late in the June quarter.

Extension of the Zara Project exploration permits has been approved by the Eritrean Minister of Energy and Mines for a further 12 months.

2. Zara Project Regional Exploration (Chalice 80%: Dragon Mining 20%)

2.1 Konate Gold Prospect

Planning for further drilling at the Konate prospect, approximately 5 kilometres south of Koka, commenced with a re-appraisal of historical Induced Polarisation (IP) data. Five diamond holes drilled at Konate in 2007 produced disappointing results despite the presence of extensive artisanal workings on microgranite-hosted quartz stockwork mineralisation similar to that found at Koka. Deep penetration 3D IP surveys conducted after the drilling identified complex resistive and conductive zones that do not appear to have been effectively tested by the drilling. Future drilling will be designed to better test these zones, guided by a better understanding of the structural setting of the mineralisation currently being developed.

2.2 Jani VHMS Prospect

A gravity survey was completed over the Jani VHMS (Volcanic-hosted Massive Sulphide) prospect approximately 30 kilometres south of Koka. This survey identified a discrete 1000 x 500 metre gravity high associated with a gossan developed in bi-modal volcanics that are believed to be stratigraphic equivalents to the volcanics that host the 40 million tonne Bisha Zn-Cu-Au deposit. An Audio Magneto Telluric (AMT) survey will be conducted during the June quarter to better define this target prior to drilling.

3. Chalice Granted Option to Acquire Dragon Mining's Interest in Zara Project

Chalice has acquired an option to purchase the remaining 20 per cent interest in the Zara Project in Eritrea from Dragon Mining Ltd (ASX:DRA).

Chalice can exercise the option at any time until 30 June 2010 by paying Dragon A\$8 million and issuing it two million Chalice shares.

Chalice has also agreed to pay Dragon a further A\$4 million on delineation of a 1,000,000 ounce gold ore reserve at the Zara Project within the currently held joint venture licences.

The option is subject to the necessary regulatory approvals with the Chalice shares issued to Dragon to be placed in escrow for 12 months.

Upon exercising the option, Chalice will own 100 per cent of the Zara Exploration Licences with the Eritrean Government being entitled to a 10 per cent free carried interest on the grant of a Mining Lease. In addition, the Government has the right (but not the obligation) to purchase a further interest of up to 30% based on an independently determined value.

4. Lower Anseba Project (Eritrea) (Chalice 100%)

Application has been made over ~1,850km² to the immediate east of the Zara Project (Figure 1). This large prospecting license is prospective for both gold and base metals.

5. Mogoraib Project (Eritrea) (Chalice 100%)

Application has been made over ~550km² to the immediate north of Nevsun Resources' Bisha Project (Figure 1). This prospecting license is prospective for both gold and base metals.

6. Investment in London Africa Limited

Chalice has an 11.8% interest in the shares of London Africa which has a ~1,560km² prospecting license immediately south of the Zara Project (Figure 1). This prospecting license is prospective for gold and base metals. Chalice has an option to increase its ownership interest in London Africa to 20% by subscribing for additional shares in London Africa at 12.5 pence per share by December 2010.

7. TSX Listing

Chalice has recently announced that it intends to seek a dual listing on the Toronto Stock Exchange ("TSX"). The Directors believe that a dual listing on the TSX will represent an important milestone in the Company's development and will further raise the profile and status of the Company within the global investment community.

A dual listing on the TSX should provide increased liquidity to the Company's current and future shareholders. In addition, it will provide increased access to the larger North American and European capital markets as the Company advances its Zara Project in Eritrea through to production.

Chalice has engaged Haywood Securities Inc to act as the Company's sponsor for the intended application for the TSX listing. It is anticipated that an application will be made during the June quarter with a view to listing shortly thereafter.

8. Australian Projects

5.1 Gnaweeda Gold Project

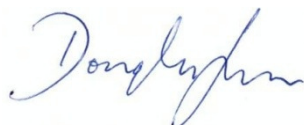

Kent Exploration Inc. reports that it has completed an eight-hole, 1,576 metre diamond drill program on the Gnaweeda Gold Project in Western Australia. 1,137 metres were drilled on the Turnberry Zone and 440 metres were drilled on the Bunarra zone.

The targeted shear/alteration zones were intersected as planned and assays are expected to be received in mid-late May.

9. Corporate

In March 2010, the Company completed an offering to place 20 million shares at A\$0.36 per share to raise A\$7.2 million before issue costs. The net proceeds will be used to complete the scheduled feasibility study on the Koka gold deposit within the Zara Project in Eritrea and for further exploration drilling at Koka East and Koka South.

At 31 March 2010, the Company had cash on hand of approximately \$9.9 million. Please refer to the attached Appendix 5B for further details.

Doug Jones
Managing Director

22 April 2010

Eritrean Government Participation Rights

Upon grant of a Mining Lease, the Eritrean Government is entitled to a 10 per cent free carried interest. In addition, the Government has the right (but not the obligation) to purchase a further interest of up to 30% based on an independently determined value.

Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Dr Doug Jones, a full-time employee and Director of Chalice Gold Mines Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and is a Chartered Professional Geologist. Dr Jones has sufficient experience in the field of activity being reported to qualify as a Competent Person as defined in the 2004 edition of the Australasian Code for Reporting of Exploration Results, Minerals Resources and Ore Reserves, and consents to the release of information in the form and context in which it appears here.

The Independent Resource Estimate for the Koka Gold Deposit was prepared by Mr Brian Wolfe, whilst employed as a Specialist Resource Geologist for Coffey Mining Pty Ltd. Mr Wolfe, who is a Member of the Australasian Institute of Mining and Metallurgy, has sufficient experience in the field of Resource Estimation to qualify as a Competent Person as defined in the 2004 edition of the Australasian Code for Reporting of Exploration Results, Minerals Resources and Ore Reserves, and consents to the release of information in the form and context in which it appears here.

The break-down between Indicated and Inferred Resource categories at the Koka Gold Deposit is as shown in the Table below.

Category	Lower grade cut-off (g/t)	Tonnes (Mt)	Gold (g/t)	Metal (koz)
Indicated	1.2	4.55	5.9	867
Inferred	1.2	0.49	4.9	77
Total	1.2	5.04	5.8	944
